Hagemann, Ingo B.:
Gebäudeintegrierte Photovoltaik. Architektonische Integration der Photovoltaik in die Gebäudehülle. Köln: Müller, 2002. ISBN 3-481-01776-6

[Book Title: Hagemann, Ingo B. Building Integrated Photovoltaic. Architectural integration of Photovoltaics in the Building Envelope. Köln: Müller, 2002. ISBN 3-481-01776-6]

Content

1. Introduction 13

2. Background of the Problem 17

2.1 Global Energy Perspective 17

2.2 The Future Use of Energy in Architecture and Urban Planning 18

2.3 Changes in Individual Buildings 20

3. Photovoltaics (PV) 21

3.1 Utilization Perspectives of PV 21
3.1.1 Advantages of PV Utilization 21
3.1.2 Disadvantages of PV Utilization 22
3.1.3 Advantages and Reasons for PV Utilization and its Integration into Building 22

3.2 Electrotechnical Basis for Utilization in Buildings 23
3.2.1 Structure and Function of Solar Cell 23

3.2.2 Electrical Properties of PV 24
3.2.2.1 Current/ Voltage Characteristic 25
3.2.2.2 The Influence of Radiation Intensity and Temperature on Energy Yield 26
3.2.2.3 Connection of Several Solar Cells into one PV Module 26
3.2.2.4 Influence of Shading on the Energy Yield 28
3.2.2.5 Solar Generators 29

3.2.3 Characteristic Variables 31
3.2.3.1 Spectral Sensitivity 31
3.2.3.2 Efficiency 31
3.2.3.3 Nominal Power 31
3.2.3.4 Performance Ratio 31

3.2.4 PV System Types 32
3.2.4.1 Line-independent PV Systems (stand-alone operation) 33
3.2.4.2 Line-coupled PV Systems (grid-connected operation) 33

3.2.5 Electrotechnical Safety Precautions 35
3.2.5.1 Contact Protection During Assembly 35
3.2.5.2 Contact Protection During Continuous Operation 35
3.2.5.3 Lighting Protection 36

3.3 PV System Components 36
3.3.1 PV Cells 36
3.3.1.1 Crystalline Silicon Cells 37
3.3.1.2 Thin-Film Solar Cells 40
3.3.1.3 New Developments 42

copyright© 2002 - Ingo B. Hagemann, Aachen, Germany

3.3.2 PV Modules 43
3.3.2.1 PV Module Components 44
3.3.2.2 PV Module Types 48

3.3.3 DC-AC Converters 48
3.3.3.1 Functions of DC-AC Converters 48
3.3.3.2 Different DC-AC Converter Concepts 50

3.3.4 Batteries 53

3.3.5 Charge Regulators 53

3.3.6 Electric Cables, Cable Connectors and Terminals 54
3.3.6.1 Cables 54
3.3.6.2 Cable Connectors and Terminals 57

4. The Sun and Solar Radiation 59

4.1 The Sun as Manifold Source of Energy 59
4.1.1 Source of Sensate Energy 59
4.1.2 Source of Healing Energy 60
4.1.3 Source of Physical Energy 60

4.2 Solar Radiation 60
4.2.1 Global Radiation 61
4.2.1.1. Direct Solar Radiation 61
4.2.1.2 Diffused Radiation 62
- *Sky-Radiation*
- *Reflection-Radiation*

4.2.2 Atmospheric Influences on the Spectral Composition of Global Radiation 64
4.2.3 Determinants for Locating the Position of the Sun 64
4.2.4 Determination and Utilization of Global Radiation Values 70

4.3 Shade and Shadow 71

4.4 Planning Pointers for Building Integrated PV Systems (BIPV) 74

5. PV - Building Integration 77

5.1 Purpose of the Building Envelope 77

5.2 Defining Terminology: Building Integrated Photovoltaic (BIPV) 79

5.3 Building Technological (Structural) PV Integration in Buildings 79
5.3.1 Development of Various Kinds of Integration, Construction Aspects and Mounting of PV 79
5.3.1.1 Integration by Adding PV 79
5.3.1.2 Integration into Building Materials 80
- *PV in Combination with Conventional Building Materials*
- *PV Integration in Prefabricated Building Materials*
- *PV as an Integral Part of Individual and Multi-Functional "Total Solutions"*

5.3.2 Area PV Applications on Buildings 81
5.3.2.1 Sloped Roofs with PV 82
- *Introduction*
- *Shape, Pitch and Orientation*
- *Build-Outs and Types*
- *Appropriateness of Different Roof Covers*

copyright© 2002 - Ingo B. Hagemann, Aachen, Germany

- *Design Considerations*
- *Integration Technology - Overview*

5.3.2.2 Flat Roofs with PV 90
- *Introduction*
- *Functions*
- *Construction and Types*
- *Application of Different PV Integration Technologies*
- *Design Considerations*
- *Integration Techniques - Overview*

5.3.2.3 Skylights with PV 98
- *Introduction*
- *Functions*
- *Types and Appropriateness of Various Shapes*
- *Design Considerations*

5.3.2.4 Exterior Wall Surface PV 101
- *Introduction*
- *Kinds of Installation*
- *Functions and Assembly of Back-Ventilated Wall Finish with PV*
- *Appropriateness of Various Wall Finish Materials*
- *Integration Technologies - Overview*

5.3.2.5 Glass Façades and Structural Glazing with PV 108
- *Introduction*
- *Functions*
- *Suitability of Various Formats for PV*
- *Assembly and Types*
- *Design Considerations*
- *Integration Techniques - Overview*

5.3.2.6 Sunshading with PV 115
- *Introduction*
- *Functions*
- *Types*
- *Suitability of Different External Sunshading Systems*
- *Design Considerations*
- *Integration Technologies - Overview*

5.3.3 Tracking Systems for PV 121
5.3.3.1 Classification 121
- *Classification by Kind of Tracking Type*
- *Classification by Kind of Tracking Steering*

5.3.3.2 Selection Criteria 123
5.3.3.3 Planning Guide 124

5.3.4 Supplemental Information for Technical Building Integration of PV 125

5.4 Energy-Technical Integration of PV 126
5.4.1 Sizing of a PV System 126
5.4.2 PV as a part of the overall Energy and Ecological Concept of a Building 130
5.4.2.1 Considerations in the Selection of Solar Technical Systems 130
5.4.2.2 PV in Combination with Other Solar Technical Measures 131

5.5 PV Design esthetical Integration 134
5.5.1 Design Diversity of PV Cells and PV Modules 134
5.5.1.1 Design Possibilities of mono(c-Si) and polycrystalline(p-Si) PV Modules 134
5.5.1.2 Esthetical Design Possibilities for amorphous (a-Si) Silicon Thin-Film Modules 138

5.5.2 Significant Esthetical Design Characteristics of PV 140
5.5.3 Analysis of Examples of Esthetically Successful PV Integration 142
5.5.3.1 Example: Kindergarten, Frankfurt-Griesheim, Germany 142

copyright© 2002 - Ingo B. Hagemann, Aachen, Germany

5.5.3.2 Example: Vocational Training Center, HEW, Hamburg, Germany 144
5.5.3.3 Example: Bayerische Allianz Unterföhring, Munich, Germany..... 146
5.5.3.4 Example: Office of the Federal President, Berlin, Germany 148
5.5.3.5 Example: Educational Training Centre, Herne-Sodingen, Germany 150
5.5.3.6 Example: Trade Association Wood, Munich,.Germany..... 152
5.5.3.7 Example: Technical Building, Solar Housing Estate at the Ohrberg, Emmerthal, Germany ... 154
5.5.3.8 Example: Pavilion "Ocean Listening", Steinhude, Germany 156
5.5.3.9 Example: Üstra Tramway Service Station, Hannover-Leinhausen, Germany 158
5.5.3.10 Example: Paul-Löbe-House, Berlin, Germany 160
5.5.3.11 Example: Solar Cube, Discovery Science Center, Santa Ana, CA, USA 162

6. Steps Necessary for a Successful Utilization of Building Integrated PV Systems 167

6.1 Implementation Difficulties and Attempts to Find Solutions..... 167
6.1.1 Making the Planning Process and Manner of Collaboration Compatible..... 167
6.1.2 Action Objectives for Overcoming Planning and Application Problems of BIPV Systems..... 171

6.2 Ecology..... 173
6.2.1 Statement of an Energy Accounting..... 173
6.2.2 Environmental Pollution Caused by Toxic Content 174
6.2.3 Availability of Resources 174
6.2.4 Recycling 175

6.3 Outlook 176

/. Plates for putting Building Integrated PV into design practise - Planning Information´s and Built Examples 183

7.1 Plates: Renewable Energy Sources 183

7.2 Plates: PV-Cells and PV-Modules 187

7.3 Plates: PV-Integration Techniques 209

7.4 Plates: Fields of application for PV on a Bldg..... 235

7.5 Plates: PV-Built Examples..... 253
7.5.1 Introduction to Documentation 254
7.5.2 PV-Project Data - technical Informations about the Built Examples 255

7.5.3 PV-Built Examples..... 259
7.5.3.1 Sloped Roofs with PV 261
7.5.3.2 Flat Roofs with PV 289
7.5.3.3 Skylights with PV 299
7.5.3.4 Exterior Wall Surface with PV 315
7.5.3.5 Glass Façades and Structural Glazing with PV 338
7.5.3.6 Sunshading with PV 353

Appendix
Abbreviations..... 383
Definition of Terminology..... 385
Reference List of Literature 395
References List of Illustrations 405
Reference List of Architects..... 429
